3-dimensional studies research-based models aids in building design decisions

research

Constellation Center is a very research-intensive project aspiring to be one of the world's finest performing arts centers. The research staff studies all periods of music, from Byzantine Chant to contemporary music such as rock & roll and jazz. To help translate this research into architecture, map-lab works closely with the Constellation Center research team to develop 3-dimensional computer models to stimulate thought and conversation related to the spatial requirements for a wide variety of performance types. To date, more than 100 models have been created, aiding the client team to make design decisions as the project begins to take shape. These studies are incorporated into the four main halls of ConstellationCenter: the Great Hall, Odeon, Jewel Box, and Music Salon.
