

project	<b>DANA BUILDING, 10TH FLOOR, GOSMAN INFUSION SERVICES</b>		
location	BOSTON, MA	client	DANA-FARBER CANCER INSTITUTE
architect	Stephen Moore w/ MDS Miller Dyer Spears	contractor	N/A
project type	ARCHITECTURE, INTERIOR DESIGN		

focus on public space  
 exploration of an organic design approach  
 integrated team design

improve

In an on-going exercise to redesign the public spaces of the Dana Building at the Dana-Farber Cancer Institute brighter, larger, accessible, and more visually interesting. This project necessitated exploring a more organic approach that added this visual variation while maintaining the strict Department of Public Health restrictions and clearances.

This was a good example of working directly with clinicians and administrative staff to determine the needs, as well as coordination of the design options presented to them. Stephen Moore lead the early design options renderings and later the drawing production for the project. Several renderings were produced with 3D models using the colors, finishes, furniture and lighting schemes provided to be commented on. It made the final implementation with a completely integrated design approach.
