

project	DANA BUILDING - JIMMY FUND PEDIATRIC CLINIC		
location	BOSTON, MA	client	DANA-FARBER CANCER INSTITUTE
architect	Stephen Moore w/ MDS Miller Dyer Spears	contractor	N/A
project type	ARCHITECTURE, RENOVATION, INTERIOR DESIGN		

improved work flow
 create welcoming environments
 work creatively in adapting spaces

transformation

An established and successful clinic in pediatric oncology - through transformed treatments and services for children and families - required a refreshed look. Stephen Moore was part of the team that worked with physicians, nurses and administrators to renovate the ten-year old facility to expand the space, improve clinical operations, create welcoming patient-focused environments and more effective nursing and staff support areas. The clinic came alive to reflect the hopeful feeling that all who work with these people cannot help but feel.

pre-existing condition

The new space - with its colorful and playful finishes in tandem with fish tanks and an overall maritime theme - has optimized flow, an expanded reception, a sinuous front desk, separate child, adolescent and adult waiting areas, plus play, study and lunch spaces tie the architectural and interior designs together as appealing but functional settings.

Exam, procedure and infusion bed capacity increased with enhanced patient privacy and oversight. In-processing, vitals and phlebotomy are consolidated for patient ease and good work flow, with new central nurses station, expanded physician workroom, pediatric pharmacy and records storage.
